AI SOC INCIDENT REPORT

Report ID	SOC-20260709-113605
Generated On	09-Jul-2026 11:36 AM
Generated By	AI SOC Analyst Assistant

Executive Summary

Threat Summary

- Attack Name: PAM (Pluggable Authentication Modules) Session Hijacking

- Description: An attacker may have hijacked a PAM session to gain unauthorized access to user credentials or enable unwarranted access to accounts.

Severity

- Severity Level: Medium to High

Confidence Score

- Overall Confidence: 80%

- Reason: The Wazuh Alert indicates a PAM session was opened, which matches the description of a potential PAM session hijacking attack. The retrieved MITRE ATT&CK; knowledge provides information on how adversaries may modify PAM components to create backdoors or steal credentials. However, the specific CVEs and NIST controls do not directly relate to the Wazuh Alert.

Possible Impact

- Possible impact: Unauthorized access to user credentials or accounts, potentially leading to data breaches or other security incidents.

MITRE ATT&CK; Mapping

Primary Technique

Technique ID: T1550

Technique Name: Abuse Elevation Control to Access Authorized Content

Tactic: Defense Evasion

Reason: The Wazuh Alert indicates a PAM session was opened, which may be an attempt to abuse elevation control to access authorized content.

Supporting Retrieved Techniques

- T1552 - Abuse Object Capabilities
- T1553 - Create or Modify System Logs
- T1554 - Abuse Service or Dynamic Linker

Related CVEs

Primary Vulnerability

CVE ID: CVE-2024-22365

Description: A vulnerability in the Linux PAM library allows attackers to cause a denial of service (blocked login process) via mkfifo because the openat call (for protect_dir) lacks O_DIRECTORY.

Reason: Although this CVE does not directly relate to the Wazuh Alert, it is a vulnerability in the Linux PAM library, which is relevant to the attack type.

Supporting Retrieved CVEs

- CVE-2024-24766
- CVE-2024-2921

NIST Security Controls and Guidelines

Primary Control

Publication: NIST Special Publication 800-53

Control ID: AU-12

Control Name: Audit and Accountability

Description: The organization must implement audit and accountability measures to detect and respond to security incidents.

Reason: Although this control does not directly relate to the Wazuh Alert, it is relevant to the detection and response to security incidents.

Supporting Security Controls

• AC-3 - Access Control

• AU-2 - Audit and Accountability

• AU-3 - Audit and Accountability

Recommended Actions

1. Review the PAM configuration to ensure it is secure and not vulnerable to attacks.

2. Implement audit and accountability measures to detect and respond to security incidents.

3. Conduct a thorough investigation to determine the extent of the potential security incident.

Security Best Practices

1. Regularly review and update PAM configurations to ensure they are secure and not vulnerable to attacks.

2. Implement audit and accountability measures to detect and respond to security incidents.

3. Conduct regular security awareness training for users to prevent social engineering attacks.
