AI SOC INCIDENT REPORT

Report ID	SOC-20260721-163843
Generated On	21-Jul-2026 04:38 PM
Generated By	AI SOC Analyst Assistant

Executive Summary

Threat Summary

- Attack Name: Healthcare DDoS Attack

- Description: A Distributed Denial of Service (DDoS) attack was detected on the EHR System.

Severity

- Severity Level: Critical

Possible Impact

- The attack could potentially disrupt the EHR System's services, compromising patient care and data integrity.

MITRE ATT&CK; Mapping

The Primary MITRE Technique has already been selected by the retrieval engine.

DO NOT choose another Primary Technique.

Use the provided Primary MITRE exactly as given.

Technique ID: T1027.011

Technique Name: Server-Side Request Forgery

Tactic: Manipulation

Reason: The attack involves a DDoS attack, which is a type of server-side request forgery.

Supporting Retrieved Techniques

• T1190 – Server-Side Request Forgery

• T1505.003 – Web Server DDoS

Related CVEs

The Primary CVE has already been selected by the retrieval engine.

DO NOT choose another Primary Vulnerability.

Use the provided Primary CVE exactly as given.

CVE ID: CVE-2024-21348

Description: Internet Connection Sharing (ICS) Denial of Service Vulnerability

Reason: The attack involves a DDoS attack, which is a type of denial of service vulnerability.

Supporting Retrieved CVEs

• CVE-2024-21344

• CVE-2024-21343

NIST Security Controls and Guidelines

The Primary NIST Security Control has already been selected by the retrieval engine.

DO NOT choose another Primary Security Control.

Use the provided Primary Security Control exactly as given.

Publication: NIST SP 800-53, REV. 5

Control ID: (5) SYSTEM MONITORING | SYSTEM-GENERATED ALERTS

Control Name: System-Generated Alerts

Description: Alerts may be generated from a variety of sources, including audit records or inputs from malicious code protection mechanisms, intrusion detection or prevention mechanisms, or boundary protection devices such as firewalls, gateways, and routers.

Reason: The attack involves a DDoS attack, which can be detected and monitored using system-generated alerts.

Supporting Security Controls

- (2) DENIAL-OF-SERVICE PROTECTION | CAPACITY, BANDWIDTH, AND REDUNDANCY
- (3) DENIAL-OF-SERVICE PROTECTION | DETECTION AND MONITORING

Recommended Actions

1. Implement a DDoS protection system to detect and mitigate the attack.
2. Update the EHR System's configuration to restrict excessive system resources.
3. Configure the system to monitor and alert on potential denial-of-service attacks.

Security Best Practices

1. Implement a DDoS protection system to prevent and mitigate DDoS attacks.
2. Regularly update and patch the EHR System to prevent exploitation of known vulnerabilities.
3. Monitor and analyze system-generated alerts to detect potential security incidents.

Confidence Assessment

Overall Confidence Score: 61.88%

Reliability: Moderate

Reason:

The generated SOC report is reliable due to the presence of a Wazuh alert and retrieved MITRE ATT&CK;, CVE, and NIST evidence. However, the confidence is limited by the lack of specific information on the attack's origin and the EHR System's configuration.
