AI SOC INCIDENT REPORT

Report ID	SOC-20260721-165055
Generated On	21-Jul-2026 04:50 PM
Generated By	AI SOC Analyst Assistant

Executive Summary

Threat Summary

- Attack Name: Healthcare DDoS Attack

- Description: A Distributed Denial of Service (DDoS) attack was detected on the EHR System.

Severity

- Severity Level: Critical

Possible Impact

- The attack could potentially disrupt the EHR System's operations, leading to a loss of critical healthcare services.

MITRE ATT&CK; Mapping

The Primary MITRE Technique is T1027.011.

Technique ID: T1027.011

Technique Name: Exploitation of System Resources

Tactic: Impact

Reason: The attack involves exploiting system resources to disrupt the EHR System's operations.

Supporting Retrieved Techniques

• T1499 - Exploitation of Functionality

• T1499 - Exploitation of Functionality

Related CVEs

The Primary CVE is CVE-2024-21348.

CVE ID: CVE-2024-21348

Description: Internet Connection Sharing (ICS) Denial of Service Vulnerability

Reason: The vulnerability could be exploited to disrupt the EHR System's operations.

Supporting Retrieved CVEs

• CVE-2024-21344

• CVE-2024-21343

NIST Security Controls and Guidelines

The Primary NIST Security Control is AU-2.

Publication: NIST SP 800-53, REV. 5

Control ID: AU-2

Control Name: Audit and Accountability

Description: The control ensures that audit and accountability mechanisms are in place to detect and respond to security incidents.

Reason: The control could help detect and respond to the DDoS attack on the EHR System.

Supporting Security Controls

• AU-6 - Audit and Accountability

• SC-5 - Separation of Duties

Recommended Actions

1. Implement a DDoS protection mechanism to prevent future attacks.

2. Update the EHR System's configuration to limit the effects of a DDoS attack.

3. Configure the system to monitor and detect indicators of a DDoS attack.

Security Best Practices

1. Regularly update and patch the EHR System to prevent exploitation of known vulnerabilities.

2. Implement a robust DDoS protection mechanism to prevent future attacks.

3. Monitor and detect indicators of a DDoS attack to ensure prompt response.

Confidence Assessment

Overall Confidence Score: 61.26%

61.26%

Reliability: Moderate

Reason:

The generated SOC report is reliable due to the presence of a clear Wazuh alert and relevant MITRE ATT&CK;, CVE, and NIST evidence. However, the lack of information on the attacker's motivations and the specific techniques used in the attack limits confidence.
