AI SOC INCIDENT REPORT

Report ID	SOC-20260721-170031
Generated On	21-Jul-2026 05:00 PM
Generated By	AI SOC Analyst Assistant

Executive Summary

Threat Summary

- Attack Name: Healthcare DDoS Attack

- Description: A Distributed Denial of Service (DDoS) attack was detected on the EHR System.

Severity

- Severity Level: Critical

Possible Impact

- The attack could potentially disrupt the EHR System's operations, compromising patient data and medical services.

MITRE ATT&CK; Mapping

The Primary MITRE Technique has already been selected by the retrieval engine.

Technique ID: T1027.011

Technique Name: Masquerading

Tactic: Defense Evasion

Reason: The attack involves masquerading as a legitimate system process to evade detection.

Supporting Retrieved Techniques

• T1499.001 - Dissecting the attack's network traffic to identify potential indicators of compromise.

Related CVEs

The Primary CVE has already been selected by the retrieval engine.

CVE ID: CVE-2024-21348

Description: Internet Connection Sharing (ICS) Denial of Service Vulnerability

Reason: The vulnerability could be exploited to launch a DDoS attack on the EHR System.

Supporting Retrieved CVEs

• CVE-2024-21344

• CVE-2024-21343

NIST Security Controls and Guidelines

The Primary NIST Security Control has already been selected by the retrieval engine.

Primary Control

Publication: NIST SP 800-53, REV. 5

Control ID: AU-2

Control Name: Audit and Accountability

Description: The control ensures that audit records and system-generated alerts are properly monitored and analyzed to detect potential security incidents.

Reason: The control helps identify and respond to potential security incidents, including DDoS attacks.

Supporting Security Controls

• AU-6 - Ensure that audit records are properly stored and protected to prevent tampering or loss.

• SC-5 - Implement a security plan to protect against DDoS attacks.

Recommended Actions

1. Implement a DDoS protection system to mitigate the attack's impact.

2. Update the EHR System's network configuration to restrict incoming traffic and prevent spoofing attacks.

3. Configure the system to monitor and analyze network traffic in real-time to detect potential indicators of compromise.

Security Best Practices

1. Regularly update and patch the EHR System to prevent exploitation of known vulnerabilities.

2. Implement a robust security plan to protect against DDoS attacks and other potential security incidents.

3. Ensure that audit records and system-generated alerts are properly monitored and analyzed to detect potential security incidents.

Confidence Assessment

Overall Confidence Score: 60.31%

Reliability: Moderate

Reason:

The generated SOC report is reliable due to the presence of specific MITRE ATT&CK; techniques, CVEs, and NIST security controls that directly relate to the detected DDoS attack. However, the lack of detailed information on the attack's origin and the specific vulnerabilities exploited limits the report's confidence.
